Main problem:

Daily use of plastic:

Everywhere is plastic and you can´t do without it, but you can reduce the use of it

A large part of plastic trash ends up in the ocean:

What you can do, we tell you in the following

What can YOU do:

Avoid plastic dishes:

Use some made of wood or other consistent material

Recycling:

It´s really easy. If you seperate your trash, the plastic can be recycled

Plan your purchase carefully and take enough cloth bags with you:

You can find cloth bags everywhere, so why using plastic ones?

„A clean environment is a human right!“

RECYCLE AND REDUCE PLASTIC

RE-USE PLASTIC BAGS

Reuse the plastic bags, and don't throw them, that way, less tutles will be harmed.

USE THE RIGHT CONTAINER

Throw the plastics in the correct ribish container

DO NOT WASTE WATER

Use as little water as possible to avoid drought

ALTERNATIVES

Use metal bottels, try to not buy vegetables, meat or fish wrapped in plàstic.

For the nature
Against the plastic waste

This April, as a school project for the Erasmus+ program, we, a group of three students, had the task to create a video to the topic "Plastic waste".

"Plastic waste" is a common and just as important topic. Plastic is not just in the bodies of animals but also in the human body. We eat plastic in the size of a credit card every week. And did you know that plastic was also found on the Mount Everest? Do you want more information? Then watch our video!

In our video:

- Good sides of plastic
- Problems
- Future problems
- What has already been done
- What has to be done
- Our own opinion

HOW TO REDUCE PLASTIC CONSUME

USE REUSABLE BAGS WHEN GOING SHOPPING

REUSE GLASS CONTAINERS

USE REUSABLE TOOLS

DON'T USE COFFEE MACHINES THAT WORK WITH CAPSULES

Plastic and plastic

plastic plastic plastic
it is very drastic
wherever is just plastic
plastic is not classic

plastic plastic plastic
killing animals is tragic
if you use much plastic
you will die tragic

the turtles are dying
and the birds aren't
flying
if we continue like these
no more home for
anybody

people aren't breathing
people aren't seeing
we consume to much
plastic
the dead is waiting for
us

PROBLEMS

The use of plastic has dangers.

We use too much of it.
This leads to garbage.
This finds its way into the nature.

Yearly we produce 400.000.000 tons of plastic.
80,000,000 tons are *in the sea now.*
Problem: It needs over *100 years* to dissolve.

OUR OWN OPINION

We definitely have to do more.
We can do more.

Nature with plastic looks awful and terrifying.

Nature without plastic looks magnificant.

PLASTIC WASTE

TODAY'S PROBLEM

by Jan Schönsteiner,
Mikko Obenauer,
Lukas Keil

Co-funded by the Erasmus+ Programme of the European Union

GOOD SIDES OF PLASTIC

Plastic has certain usabilities that are indeed astonishing.

First it is cheap and resistent.

That is why it is used for/in:

-pharmaceutical industry
-astroengineering
-conserving food
-our modern *life*

FUTURE PROBLEMS

If we do not stop our consum, an extinction will take place.
Many animals die because of the plastic.
In the sea, plastic forms in *microplastics*.
Small particles out of plastic.
It is and will be every-where.
Even in the *human body*.
Consequences are not fully researched.

WHAT HAS BEEN DONE

To stop producing more plastic garbage, a lot of people recycle.
Some people even pick up plastic in the nature.
But:

WHAT HAS TO BEEN DONE

We have to pick up more plastic.
We have to use less plastic.
We have to throw away less plastic.

Our motto:

„The world changes by your example, not your opinion.“

Why this flyer?

We want to take care of our environment.

We made an explanatory video where you can find some more information about the topic

Also, we want to give you an expression of what we think the main problem is and what YOU can do
